

**Sprung Instant Structures**

Sprung Instant Structures satisfy the need to provide enclosed space quickly and economically, especially on sites where transportation is difficult or speed of installation is essential. These structures are designed using Membrane Stress Theory and are constructed from a series of extruded aluminum arches covered by an all-weather outer membrane of PVC coated polyester scrim. This synthetic fabric is certified flame retardant. The structures are available in different sizes and colors and are suitable for either city or rural environments. Sprung Structures may be designed for local codes and standards or to meet special user requirements.
