

Advanced Bending and Tempering System for Architectural Glass

The advanced bending and tempering system for architectural glass both bends and tempers glass having thicknesses from one-quarter to three-quarters inch and in sizes up to 84 inches by 144 inches in one quick continuous process. The glass can be formed into cylindrical, "S" and "J" shapes with bends up to ninety degrees and bend depths up to 25 inches. The glass is bent horizontally, without tong marks.
