

**Baha'i House of Worship Restoration**

The Baha'i House of Worship Restoration restored the archaic concrete of this structure to its original color, texture, and finish. Building ornamentation was also restored, using hand-patching, precast, and cast-in-place methods. A low-pressure water mist cleaning treatment was used to clean the concrete. Atmospheric staining, organic growth, and mineral deposits were removed from the concrete. A custom hoisting system developed and used by the restoration team provides easy access for any future repairs.
