

1996 NOVA AWARD WINNER**Twist Off Blind Bolt Provides Blind Connections to Structural Steel Tubes**

A twist-off blind bolt, called Ultra-Twist , is a recently developed structural steel fastener which meets the tensile strength and tension requirements of the A325 Specification. It is used for joining structural steel members where there is access only from one side such as in joints between tubular sections. The Ultra-Twist bolt is available in three diameters: 3/4, 7/8, and 1 inches; and in grip lengths that range from one quarter to three inches. The Ultra-Twist fastener is easily installed in about 35 seconds with a standard electric shear wrench used for ordinary twist-off fasteners.
