

The Collom Duct Cleaning System

The Collom Duct Cleaning System provides sanitized cleaning for all types of air ducts regardless of their dimensions, shape or form. The Collom system is set apart from others by a unique air pressure cleaning head. Dirt, debris and contaminants are removed from the duct with speed and efficiency. The dirt is simultaneously collected by a high capacity vacuum cleaner connected directly to the main air duct channel. The system is self-propelled, flexible, and effective for post fire and pesticide remediation. Cleaning solution and disinfectant can be dispensed after initial cleaning. The system reduces the time and cost for cleaning ventilation systems.
