

Quick Start Employee Training Program

Quick Start is a formalized employee training program to improve production, safety and employee retention for an electrical construction contractor. Each new employee spends three or four days in the program. The program introduces the new hire to company and industry practice, and covers topics such as the career opportunities, acquisition of work, company profits, labor agreements, ethics, safety, materials used and wiring details. The program has been in operation for two years and has lowered turnover, improved production, and lowered accidents.
