

Home4Me™ Panelized House

A Home4Me™ is a 225 square foot house that contains all the basic features of a standard size house. Like a traditional single family house, it is designed to national building codes, and is constructed of common materials. A Home4Me™ is a panelized home complete from footings to roof including kitchen cabinets with appliances, bathroom with vanity, plumbing, electrical, interior finishes, closet, and a loft under a cathedral ceiling. It is fully insulated and heated. The basic Home4Me™ is delivered in one package on a flatbed truck. The foundation, framing and interior finishes are all designed to be erected within a week's time by one person with a knowledge of carpentry and two helpers, all using hand tools. A licensed plumber and electrician will be needed for their work. The Home4Me™ is the core unit of a quadrant design that can be expanded in a logical and organized sequence. The expansion units, each 15'-0" x 15'-0" (225 square foot), are a living room unit, a one bedroom unit, and a two bedroom unit. When added to the core, they create a three bedroom, 900 square foot home.
